Automating Employee Data - Project Report

Date: 5 April 2026

Team ID: SWTID-2026-5153

Project Name: Automating Employee Data

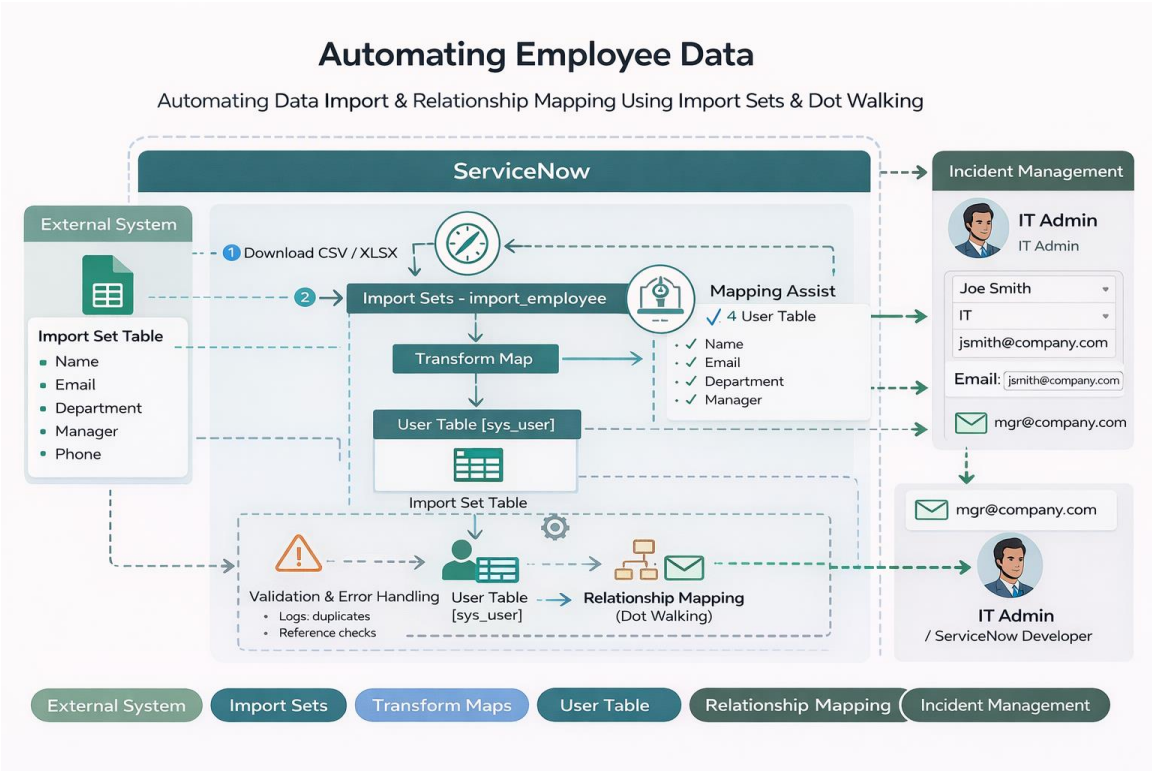
1. Purpose of Document

This document explains the implementation, testing, and results of automating employee data integration into ServiceNow.

2. Implementation Steps

- Prepare external employee data file (CSV/Excel/XML) with Name, Email, Department, Manager, Manager Email.
- Load data using Import Sets and verify staging table.
- Create Transform Map to sys_user table with Manager reference mapping.
- Execute transform and validate records.
- Configure Incident form using dot walking.
- Apply Dictionary Override for Priority field.
- Test full workflow with incident assignment.

3. Architecture Diagram



4. Model Performance Testing

Parameter	Details	Result
Data Import	Import Sets	Success
Transform Map	Field Mapping	Accurate
Dot Walking	Incident Display	Working
Dictionary Override	Priority Change	Applied

5. Conclusion

This project integrates external employee data into ServiceNow, reducing manual effort and improving accuracy. Dot walking provides real-time relational data visibility, while dictionary override ensures customized behavior without affecting parent tables.
